

a picture information input means for [receiving image] input of picture information [from] for an image forming apparatus, [one] which is an example of said external [devices] device;

a picture information memory means for storing therein the input picture information [inputted from said picture information input means]; and

a converting/sending means for converting image data to be sent to said image forming apparatus to image data adapted to said image forming apparatus according to the picture information stored in said picture information memory means and sending the image data using a synchronizing signal adapted to said image forming apparatus.

#### **REMARKS**

Applicant is submitting this reissue application, including the amendments herein, in order to correct some unnecessary limitations and/or wrong language in claim 1 of the 6,111,605 Patent. Applicant requests prompt entry of the changes and allowance of this reissue application.

#### **Status of Claims - 37 CFR 1.173(c)**

The patent (6,111,605) contains 3 claims. All of those claims remain active in this reissue. Claim 1 has been amended, whereas claims 2 and 3 remain as issued in the original deed for the 6,111,605 patent.
